

Task 1

Design a modern "My Portfolio Page" using **HTML and CSS**, where you must use **CSS flexbox and grid to structure the layout**, apply gradient backgrounds, and include at **least one background image**. Your page should contain a header, a two-column section with an image and personal details, a skills section in grid format, a **flexbox layout for project cards**, and a footer. Use only CSS for styling — **no JavaScript, and no external CSS frameworks**.

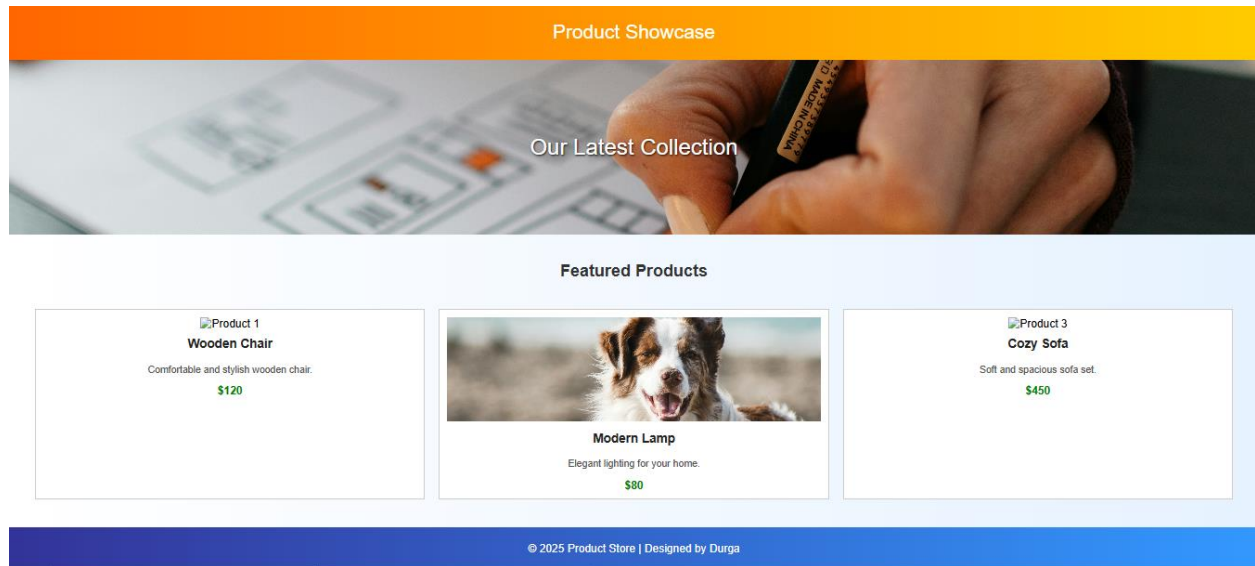

Sample Output:

Task 2

Create a "Responsive Product Showcase Page" using only HTML and basic CSS, where you must use **CSS flexbox to organize a header and footer**, a grid layout to display multiple product cards, and apply linear gradients to section backgrounds. Add a background image in the hero section and include product details **like name, image, price, and short description**. Style everything using only basic CSS properties use margin & padding.

Sample Output:

Task 3

Design a complete product features landing webpage using only HTML and basic CSS (using margin or padding), which includes a header with gradient background, a hero section with background image and centered text, a Flexbox-based horizontal feature section, a two-column Grid layout for product benefits with at least one gradient background, a styled pricing comparison table with three plans, and a footer with gradient background—all visually styled using borders, background colors, gradients, and layout techniques.

Sample Output :
