

## Task 1

Create a structured personal profile webpage using HTML and basic CSS. The layout should include: A profile section with your image and basic info like **name**, **profession**, and **bio**. A skills table listing at least 3 skills, their level, and experience. Two **action buttons** labeled 'Follow' and 'Message', apply margin and padding for spacing, and avoid using flexbox. and clean text formatting.

Sample output:

### My Profile

**Name:** Durga Dev  
**Profession:** Frontend Developer  
**Bio:** I love building UIs with HTML, CSS, and JavaScript!

#### Skills Table

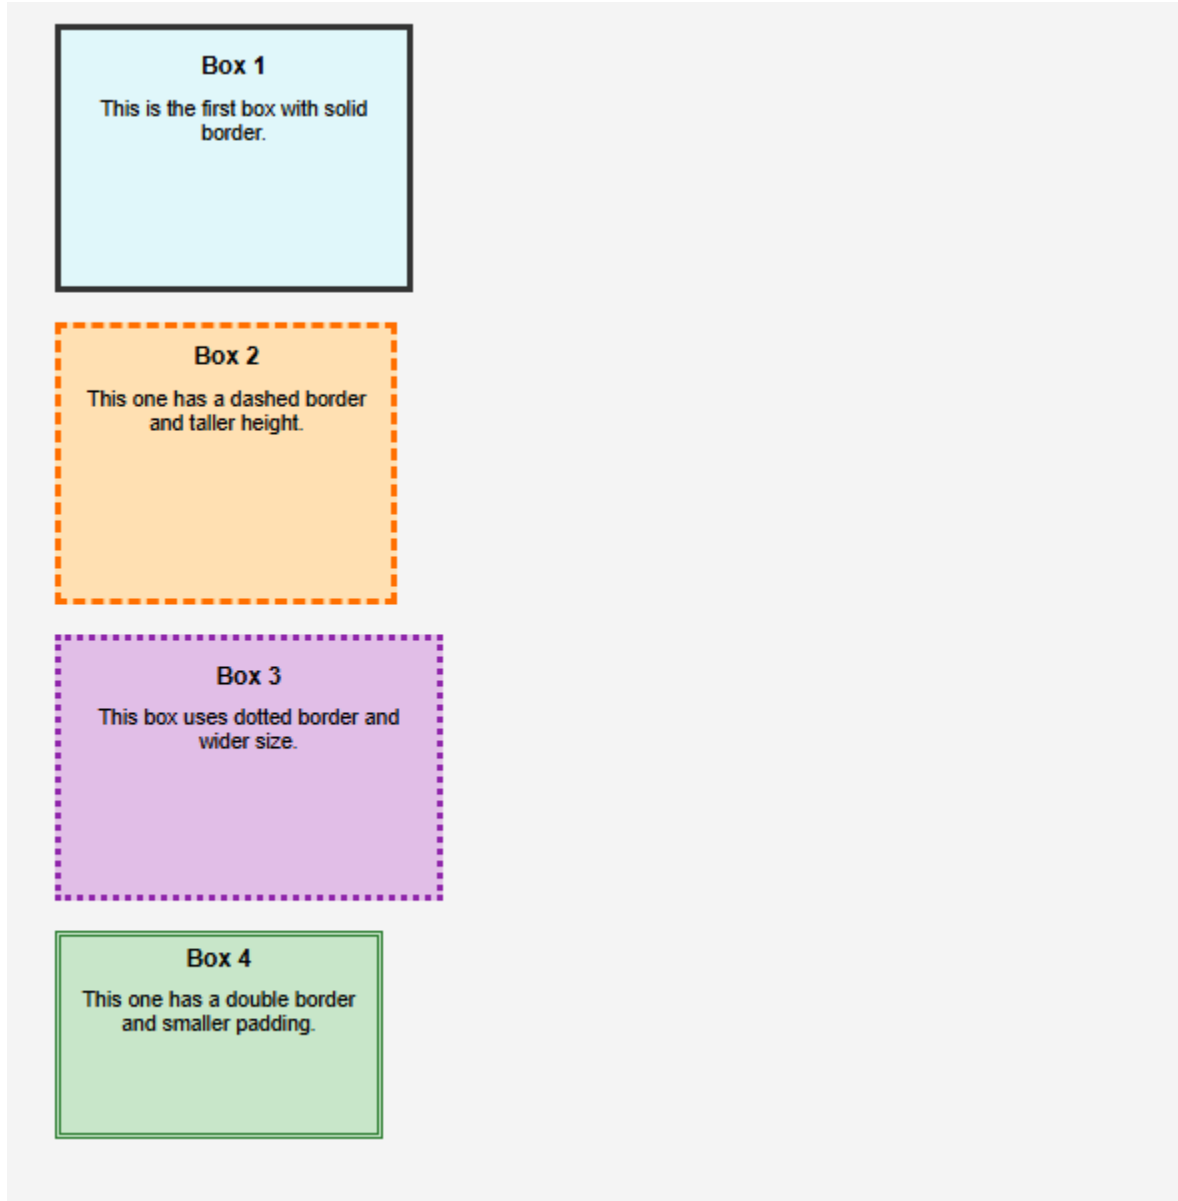

Skill	Level	Years of Experience
HTML	Advanced	3
CSS	Intermediate	2
JavaScript	Intermediate	2

[Follow](#)[Message](#)

## Task 2

Design a 2x2 box layout using only HTML and CSS where each box has unique box model properties like different borders, padding, margins, widths, and heights without using **flexbox, grid, or positioning**.

## Sampe Output:

## Task 3

Design a blog layout using only HTML and basic CSS box model properties such as **width, padding, margin, and border**, without using **float, display, flex, grid, or position**. The layout should include a blog title, a main content area with at least two blog posts, and a sidebar containing widgets.

## Sample output:
