Create a fully structured and styled HTML webpage using all major semantic HTML tags, form elements, lists, tables, and text formatting tags, and apply only basic CSS (like colors, borders, fonts) — strictly without using any margin or padding properties.

Sample output :

Create a restaurant menu webpage using only HTML and basic CSS (without using any margin or padding). The page should include a header, navigation bar, multiple menu sections (like starters, main course, desserts), at least one table for food items, a customer review using blockquote, a food order form, a collapsible details section with chef's note, and a sample JSON using the code tag. Also use formatting tags like mark, abbr, strong, em, sub, sup, and use basic styling like background colors, borders, text alignment, and font changes.

Sample output :

TastyBites Restaurant

Delicious food, delightful experience

Home Menu Order Contact

Starters

- **Tomato Soup** - ₹99/- Mild

Task 3

Create a complete personal information webpage using only HTML and basic CSS (without using margin or padding). The page should include a header, footer, and a main section with your name, date of birth, address, education, career goal, contact details using a table, and a list of hobbies or skills. Style the elements with background colors, borders, font styling, and basic layout techniques.

Sample output :

About Me

Name: Durga

Date of Birth: 10th October 1998

Address: Hyderabad, Telangana, India

Education: B.Tech in Computer Science

Career Goal: To become a Full-Stack Developer
